PLATES

(Plates C-1, C-2 and C-3 are bound at end of bulletin)

C-1. Ground Water Basins in Northeastern California.

C-2. Average Depth to Water in Wells, Sacramento Valley and San Joaquin County, Spring 1958 to Spring 1963.

C-3. Fluctuation of Water Level in Wells in Sacramento Valley and San Joaquin County, Central Valley Region.

(Plates C-4 through C-13 are in pocket)

C-4. Lines of Equal Elevation of Water in Wells in Lower Sacramento Valley and San Joaquin County, Fall 1962.

C-5. Lines of Equal Elevation of Water in Wells, Butte, Glenn and Tehama Counties, Fall 1962.

C-6. Lines of Equal Depth to Water in Wells in Lower Sacramento Valley and San Joaquin County, Fall 1962.

C-7. Lines of Equal Depth to Water in Wells in Butte, Glenn and Tehama Counties, Fall 1962.

C-8. Lines of Equal Elevation of Water in Wells in Lower Sacramento Valley and San Joaquin County, Spring 1963.

C-9. Lines of Equal Elevation of Water in Wells, Colusa, Butte, Glenn and Tehama Counties, Spring 1963.

C-10. Lines of Equal Depth to Water in Wells in Lower Sacramento Valley and San Joaquin County, Spring 1963.

C-11. Lines of Equal Depth to Water in Wells in Colusa, Butte, Glenn and Tehama Counties, Spring 1963.

C-12. Lines of Equal Change of Water Levels in Wells in Lower Sacramento Valley and San Joaquin County, Spring 1958 to Spring 1963.

C-13. Lines of Equal Change of Water Levels in Wells, Colusa, Butte, Glenn and Tehama Counties, Spring 1958 to Spring 1963.

AUTHORIZATION

Authorization for the continuing program of ground water measurement and collection, and publication of ground water level data is included in Sections 226 and 12616 of the California Water Code. Section 226 provides that:

> "The department, either independently or in cooperation with any person or any county, state, federal, or other agency, may do any of the following:
>
> (a) Conduct investigations of all or any portion of any stream, stream system, lake or other body of water;
>
> (b) Investigate either or both surface and underground water conditions;
>
> (c) Collect records of diversion and use of water;
>
> (d) Supervise distribution of water in accordance with agreements and court orders therefor."

Section 12616 provides that:

> "The department may conduct investigations of the water resources of the State, formulate plans for the control, conservation, protection, and utilization of such water resources, including solutions for the water problems of each portion of the State as deemed expedient and economically feasible, and may render reports thereon. In conducting such investigations and formulating such plans, the department may conduct investigations and surveys to determine the availability, usability, extents, and boundaries of underground basins."

ACKNOWLEDGMENTS

In the preparation of this report, valuable assistance and contributions were received from many public and private agencies. Special mention is made of the following agencies whose cooperation is gratefully acknowledged.

Arcade County Water District
Butte County
California Water Service Company
Colusa County
East Bay Municipal Utility District
Glenn County
Lake County
Placer County
Sacramento Municipal Utility District
San Joaquin County
Solano County
South San Joaquin Irrigation District
South Sutter Water District
Sutter County
Tehama County
United States Bureau of Reclamation
United States Geological Survey
Ground Water Branch
Yolo County
Yuba County

CHAPTER I. INTRODUCTION

The ground water resource of California has long been recognized as one of the major natural resources of the State which presents problems in use and conservation. The ever increasing rate of draft on the ground water reservoirs makes the problems more numerous and complex; yet the need for a solution becomes ever more urgent.

All studies of ground water problems and plans for solution have one factor in common; they must be founded upon accurate records of ground water elevations obtained over a period of many years. This is true whether the problem is a determination of safe yield of a ground water basin, operation of a basin for cyclic storage in conjunction with surface water supplies, the control of sea-water intrusion, or any of the many other problems that must be solved if the benefits California derives from its ground water storage basin are to be maintained.

The State, through the Division of Water Resources, began the collection of ground water data in 1930 in connection with special investigations of water resources of specific areas, and has gradually developed a continuing program of basic data collection. Through cooperative activities of federal and local agencies, coordinated and augmented by the department, the program of annual, semiannual, and monthly measurement of ground water levels has gradually expanded to include more ground water basins in California.

Scope of Report

This report contains all available ground water level measurements which were measured or collected by the department during the period July 1, 1962, through June 30, 1963, hydrographs of selected wells, and contour maps in Northeastern California, for which the boundaries are shown on Page C-iii.

There were 2120 wells measured in this area during 1962-63. The number and frequency of measurement of these wells and the average change to ground water level in wells from the spring of 1962 to the spring of 1963, are shown for each basin in the summary tables for the Northern Central Valley Region and the Northern Lahontan Region.

Measurement Techniques

Elevation of ground surface at a well is usually taken from topographic maps of the U. S. Geological Survey. Depth to water is the distance from the ground surface to the water level in the well.

In most wells the depth to water is a direct measurement made with a metal tape and is accurate to approximately $\pm$ 0.1 foot. In some wells, especially deep ones, measurements are made with an air line and pressure gage, or an electric sounder.

Flowing, or pressure wells, are sometimes measured by the use of either pressure gages or static tubes. The figures in the tables under "Ground to Water Surface" shown with a minus (-) indicate that the static water level in the well is above ground surface.

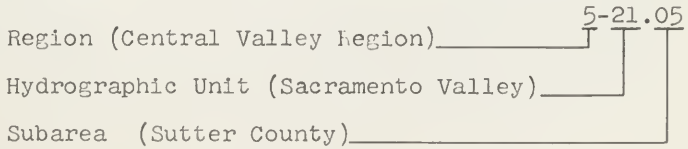
Well grids are selected to reflect the ground water conditions of the area, to prepare ground water level contour maps and to provide good areal distribution. These grids are continuously being reviewed. As wells become unmeasurable, and new, measurable wells are developed in the area, the grids are revised.

Numbering Systems

The numbering systems used by the department were developed to facilitate processing of water level measurement data.

Region and Basin Designation

The regions used in this report are geographic areas defined in Section 13040 of the Water Code. That portion of Northern California covered by this report comprises the northern portion of the Central Valley Region No. 5 and the northern portion of the Lahontan Region No. 6. A decimal system of the form 0-00.00 has been selected according to geographic regions, hydrographic units and subareas as follows:



Well Numbering System

The state well numbering system used in this report is based on township, range, and section subdivision of the Public Land Survey. It is the system used in all ground water investigations and for numbering all wells for which data are published or filed by the Department of Water Resources. In this report the number of a well, assigned in accordance with this system, is referred to as the State Well Number.

Under the system, each section is divided into 40-acre tracts lettered as follows:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Note that I and O are omitted in the grid above.

Wells are numbered within each 40-acre tract according to the chronological sequence in which they have been assigned State Well Numbers. For example, a well which has the number 16N/3E-17K1, M would be in Township 16 North, Range 3 East, Section 17, Mount Diablo Base and Meridian, and would be further designated as the first well assigned a State Well Number in tract K. Well numbers are referenced to the Humboldt Base and Meridian (H), the Mount Diablo Base and Meridian (M), or the San Bernardino Base and Meridian (S).

In this report all well numbers are referenced to the Mount Diablo Base and Meridian; therefore, the M at the end of the number was omitted.

CHAPTER II. GROUND WATER CONDITIONS

Northern Central Valley Region

There are 33 ground water basins or areas in the Northern Central Valley Region for which data are reported as shown on Plate C-1. The ground water basins are separated physically by nonwater bearing rock, constriction in permeable materials, topographic ridge or shoreline of a lake. Ground water areas are subdivisions of ground water basins and are separated on the basis of political boundaries such as a county line or boundary of an irrigation district. The Northern Central Valley Region comprises the Sacramento River Basin and the northern portion of the San Joaquin River Basin.

Average changes in ground water levels from the spring of 1962 to the spring of 1963, and the maximum and minimum measured depth to water in each basin or area are given in Table 1. A summary of ground water level data collected in the Northern Central Valley Region is presented in Table 2. Similar data for the Northern Lahontan Region are shown in Tables 3 and 4. Ground water level measurements obtained during the reporting period, July 1, 1962 to June 30, 1963, are listed in Table 5.

The average annual depth to water for the areas in the Sacramento Valley and San Joaquin County since 1958 is depicted on Plate C-2. Hydrographs showing fluctuations in water levels during the period of record at a few selected wells are presented on Plate C-3.

Ground water contour maps of the elevation of ground water and the depth to ground water in wells for the fall of 1962 in the Sacramento Valley and San Joaquin County are shown on Plates C-4, C-5, C-6, and C-7, and, for the spring of 1963, on Plates C-8, C-9, C-10, and C-11. Plates C-12 and C-13 show "Lines of Equal Change of Water Levels in Wells" for the Sacramento Valley and San Joaquin County for the five-year period, spring of 1958 to spring of 1963.

In the ground water areas covered in the Northern Central Valley Region, from the spring of 1962 to the spring of 1963, the average ground water level rose in 15 areas and declined in 17 areas. The greatest average rise was 6.0 feet in Solano County while the greatest average decline was 4.6 feet in High Valley.

In the major pumping depressions, located south of Yuba City in Sutter County, northwest of Wheatland in Yuba County, south of Pleasant Grove in Sutter and Placer Counties, west of Elk Grove and west of Galt in Sacramento County, and in the vicinity of Stockton in San Joaquin County, the ground water level continued to decline, although the rate of decline was slowed during the period of this report.

In the only other major pumping depression, located east of Dixon in Solano County, the ground water level rose between 2 to 3 feet and the western slope of the depression moved slightly eastward, causing the depression to close.

Northern Lahontan Region

There are five ground water measurement areas in the Northern Lahontan Region as shown on Plate C-1. Average changes in the ground water level, from the spring of 1962 to the spring of 1963, and the maximum and minimum measured depth to water in each basin or area are given in Table 3. A summary of ground water level data collected in the area is presented in Table 4. Ground water level measurements obtained during the reporting period, July 1, 1962, to June 30, 1963, are listed in Table 5.

In the four ground water basins for which changes from the spring of 1962 to the spring of 1963 are reported, the ground water levels rose in all basins. The greatest average rise was 4.0 feet in Surprise Valley.

TABLE 3

TABLE 5

RECORDS OF GROUND WATER LEVEL MEASUREMENTS
July 1, 1962 to June 30, 1963

Explanation of the Headings and Symbols
Used in the Columns of the Table

State Well Number - Refer to the explanation in Chapter I of the text on "Well Numbering System."

Well Use - The use of water is indicated as follows:

Code	Well Use
1	Domestic
2	Irrigation
3	Municipal
4	Industrial
5	Injection
6	Drainage
7	Domestic and Irrigation
8	Test
9	Stock
0	Unused

Well Depth - Well depths shown were reported by the owner, obtained from a driller's log, or measured at the time of the well canvass.

Period of Record - The last two digits of the year the record began or ended are shown.

Ground Surface Elevation - The numbers in this column are the elevation in feet above mean sea level (U.S.G.S.) of the ground surface at the well.

Date - The date shown in the column is the date when the depth measurement given in the next column was made.

Ground to Water Surface - This is the measured depth in feet from the ground surface to the water surface in the well; certain of the depth measurements in the column may be preceded by a number in parentheses to indicate a questionable measurement. The code applicable to these "questionable measurements" is as follows:

(1) Pumping
(2) Nearby pump operating
(3) Casing leaking or wet
(4) Pumped recently
(5) Air or pressure gage measurement
(6) Other
(7) Recharge operation at or near well
(8) Oil in casing
(9) Caved or deepened

When a measurement was attempted, but could not be obtained, then only a number in parentheses is shown in the column. The code applicable to these "no measurements" is as follows:

(1) Pumping
(2) Pump house locked
(3) Tape hung up
(4) Cannot get tape in casing
(5) Unable to locate well
(6) Well has been destroyed
(7) Special
(8) Casing leaking or wet
(9) Temporarily inaccessible
(0) Measurement discontinued

The words FLOW and DRY are shown in this column to indicate a flowing or dry well, respectively.
A minus preceding the number in this column indicates that the static water level in the well is this distance in feet above the ground surface.

Water Surface Elevation - This is the elevation in feet above mean sea level (U.S.G.S. Datum) of the water surface in the well. It was derived by subtraction of the depth measurement from the ground surface elevation.

Agency Supplying Data - Each number in this column is the code number for the agency supplying data for that measurement. The agencies supplying data for this report and the code numbers assigned to them are as follows:

Agency Code	Agency
4202	Sacramento Municipal Utility District
4400	Arcade County Water District
4701	California Water Service Company
5000	U. S. Geological Survey
5001	U. S. Bureau of Reclamation
5050	Department of Water Resources
5100	Tehama County
5101	Colusa County
5102	Sutter County
5103	Yuba County
5104	Yolo County
5105	Glenn County
5106	Butte County
5107	Placer County
5109	Solano County
5110	San Joaquin County
5111	Lake County
5401	South Sutter Water District
7518	South San Joaquin Irrigation District
8201	East Bay Municipal Utility District
